## PROJECT

In my project, I downloaded Medicare data from the Centers for Medicare & Medicaid Services (CMS) website and performed the data analysis using R. The goal was to assess factors affecting the number of Delaware Medicare beneficiaries receiving annual wellness visits to support a campaign. The investigation addressed the questions: How many are primary care practices in Delaware? Which practice has the highest volume of Medicare annual wellness visits? What insights would be valuable for a quality improvement campaign aimed at increasing annual wellness visits? The campaign targets female physicians with MD in Internal Medicine and Family Practice, and focuses on primary care practices in specific ZIP codes in Wilmington and Newark, Delaware.
